

LUMEN

Multi-layer Dip Coating Equipment

Wheel Width

500~1200mm

Coating Thickness

25~500nm

(The coating thickness and error value vary depending on the glue CPS and material characteristics.)

Substrate Thickness

23-200 μ m

Machine Speed

~60M/min

Heat Sources of The Oven

IR(Tubular Heating Elements)

※ Customized Available.

The coating width and speed of Dip Coating Machine Series can be customized to meet various customers' demands. Moreover, we offer selective mechanisms including Automatic Material Receiving/Landing, Automatic Tension Control System, Auto-Shutdown with length control for Material Lacking.

Its primary structure is made by Heat Treating Steel which has stress-free resistance. The fuselage with monolithic structure can be very effective in improving the stability of high-speed manufacturing, as a further matter, the durability also can be increased by its anti-rumble and environmental suitability.

Precise Manipulation ♦ Steel Fuselage

- ♦ Functional film can be formed simultaneously by duplex Dip Coating
- ♦ Non-Contacting Oven provides best heat conductivity and airflow distribution
- ♦ Automatic Tension Control System with PLC interface
- ♦ Automatic EPC, Static Elimination and Concentration Control System
- ♦ Automatic Material Tube Receiving/ Landing

Product Applications

Other Materials	Carbon Fiber, Aluminum Plastic Film, Copper Foil, Lithium Battery, All Kinds of Soft Package Materials.....etc.
Medical Type	Face Masks 、transdermal Patches 、 various Medicine Coatings.....etc
Fabrics	Nylon 、 Filament 、 Non-woven Fabric 、 Lycra 、 EVA.....etc

Dip Coating Work Station
